

Parker Fawcett

Herriman, UT | Parkerscottfawcett@gmail.com | linkedin.com/in/parker-fawcett-0713a7407 | parkerfawcett.com | github.com/Parker-Fawcett

AI engineer at CHG Healthcare building agent tooling and data workflows for a 60+ person division. Founder of Skora, a college-admissions software company, and author of research on verifying AI coding agents and on how model-evaluation metrics hide unstable decisions.

EXPERIENCE

AI Skills Engineer | CHG Healthcare, Enterprise Data & AI June 2026 - Present

- Built reusable AI-agent skills infrastructure on MCP, Python and GitHub, with automated tests and security scanning in CI, used across a 60+ engineer division. Converted from summer intern to full-time engineer.
- Centralized shared tooling in one repository that pushes updates to downstream repos automatically, removing cross-repo drift and manual review steps.
- Built a CareerMD lead-generation pipeline (n8n, web extraction, multi-source enrichment, AI-assisted entity resolution, rule-based validation, duplicate detection) that routes qualified records into Salesforce behind a dry-run approval step.
- Wrote Python and SQL workflows with Snowflake integrations, turning business requirements into production tools.

Co-Founder & CEO | Skora (skoraadmit.com) 2025 - Present

- Co-founded and built a college-admissions platform: free tools for students (admission chances, college matches, essay feedback) and paid client-management and white-label tools for counselors on \$49 to \$199 monthly plans.
- Engineered the full product in Next.js, TypeScript, Postgres, Stripe and Clerk: 80+ API endpoints, AI essay review, and admissions estimates built on U.S. Department of Education data (College Scorecard, IPEDS). Accepted into the JATC business incubator after a pitch.

RESEARCH & OPEN SOURCE

Rebuild Dossier | Sole author and maintainer, arXiv:2608.23616 (cs.SE) 2026

- Wrote a 48-page paper on verifying AI coding agents and released the tool as MIT-licensed open source (256 commits, installable with npx), backed by 660+ automated tests.
- Showed that passing tests do not prove an agent rebuilt an app correctly: in one comparison, the agent that followed the rules failed a held-back test while the rule-breaking agent passed everything. Generated tests are checked by deliberately breaking the original code.

When AUC Survives but Portfolios Do Not | Author, SSRN 7468682 Sept 2026

- Audited a machine-learning stock-selection study (188 monthly decisions, 200-stock universe): test AUC moved from 0.553 to 0.551 while 61.1% of the portfolio changed. Sealed 16 experiments behind a provenance manifest so every result reproduces.

PRODUCTS

- Founded Fawcett Capital LLC (May 2026) and operate three live products: **CatchAndTrade**, a trading-card marketplace with in-browser card scanning (374 commits); **MyNexusAI**, an AI receptionist for calls and texts (\$29 to \$299 monthly plans); and **Alvien**, an AI tool that stress-tests a business and writes the report for agencies.

LEADERSHIP

Founder & Executive Director | Code Elevation 2025 - 2026

- Ran a regional youth coding competition for 30+ participants; won Pluralsight and CHG Healthcare sponsorships through cold outreach and managed a \$1,650 prize pool.

Lead Event Coordinator | JATC and Cypress Credit Union Entrepreneurship Summit 2026 - Present

- Leading a district-wide entrepreneurship conference for hundreds of students: logistics, branding and budget.

EDUCATION

Herriman High School & Jordan Applied Technology Center Expected June 2028

- GPA 3.8 unweighted. Concurrent enrollment at SLCC; AP Language, AP World History, AP Human Geography.

SKILLS

Languages	Python, TypeScript, JavaScript, SQL
AI & agents	MCP, agent skills, RAG, agent evaluation, Claude Code, LLM APIs (Groq, OpenRouter)
Data & backend	Snowflake, PostgreSQL, Redis, Drizzle ORM, Node.js, FastAPI, n8n, Salesforce integration
Web & quality	Next.js, React, Tailwind, pytest, Vitest, Playwright, GitHub Actions, CodeQL, Docker, Stripe, Clerk
